Subject. Please Support the Consensus Plan -- FCC WT Docket #02-55

Commissioner Kevin J Martin
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dear Commissioner Martin,

Emergency response communications have never been more critical, or more difficult

That's because of a common problem on police, fire and EMS radios interference. Interference, garbled or dropped communications, inhibits first responders from doing their jobs safely and effectively. Essentially, if first responders can't communicate, they can't help and may themselves be in danger.

There is a solution before the FCC the Consensus Plan. Over 300 public safety organizations, local governments, and congressional officials support this Plan because it eliminates interference before it occurs and at no additional cost to federal, state or local budgets - or the American taxpayer.

The 300 Consensus Plan supporters that have filed with the FCC, along with John Walsh, host of America's Most Wanted, recognize the importance of communications for America's police, fire and EMS workers. This problem has existed long enough, and our first responders deserve better. I am asking you to help.

Please listen to the voices of public safety. Our neighborhoods, families and fellow public safety professionals cannot afford to wait any longer.

Sincerely,

Kat Wilkinson

Project 25 forced the move to this frequency band. It was a known problem at the time, but ignored. NTIA new of the coming problem. But the money was more important. Now the only way to make it work is to save taxpayer money and shift the burden to the big private companies. I do not agree with the financial shift, but do agree this is the only way to handle resolving this problem in a quick time frame. And this problem needs to be handled quickly, before real people are hurt.

As both an amateur radio operator and a first responder, I know the importance of good communications. Often because of this problem, we have resorted to using amateur communications. (My dispatcher is also an amateur operator, but tohers aren't so lucky).

Let's keep wireless carriers and public safety in speerate sections of spectrum, 8xx for public safety, 19xx for wireless. This provides over 1Gz of seperation, and the problem should go away.

That's because of a common problem on police, fire and EMS radios: interference. Interference, garbled or dropped communications, inhibits first responders from doing their jobs safely and effectively. Essentially, if first responders can't communicate, they can't help and may themselves be in danger.

There is a solution before the FCC: the Consensus Plan. Over 300 public safety organizations, local governments, and congressional officials support this Plan because it eliminates interference before it occurs and at no additional cost to federal, state or local budgets - or the American taxpayer.

The 300 Consensus Plan supporters that have filed with the FCC, along with John Walsh, host of America's Most Wanted, recognize the importance of communications for America's police, fire and EMS workers. This problem has existed long enough, and our first responders deserve better. I am asking you to help.

Please listen to the voices of public safety. Our neighborhoods, families and fellow public safety professionals cannot afford to wait any longer.

Sincerely,
